Covid-19

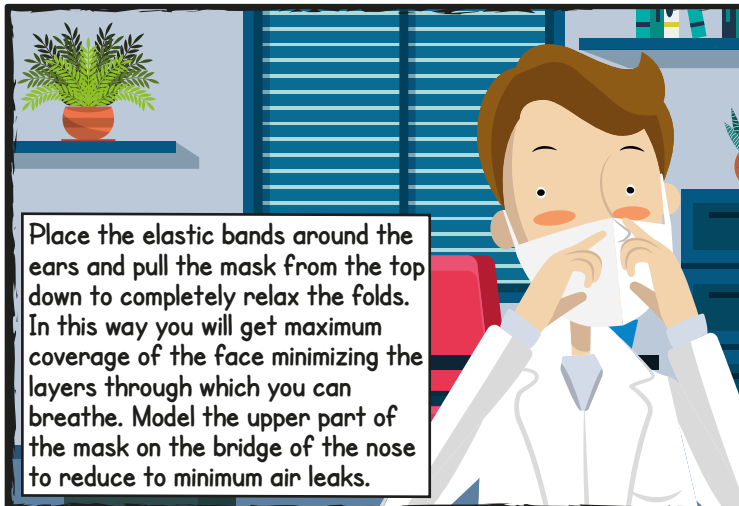

To respect our colleagues and guests, here are some simple rules to follow to limit any type of bacterial transmission inside our company area

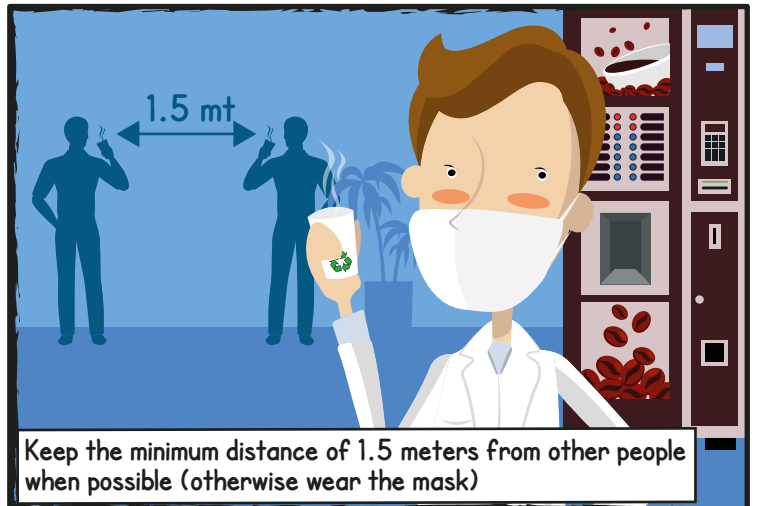

Before putting on the mask, wash your hands with water and soap or with an alcoholic solution

Insert your fingers through elastic bands. The clip for the nose must be arranged upward. Adjust the mask on nose and mouth and don't touch the mask while you're wearing it; if you touch it, wash your hands.

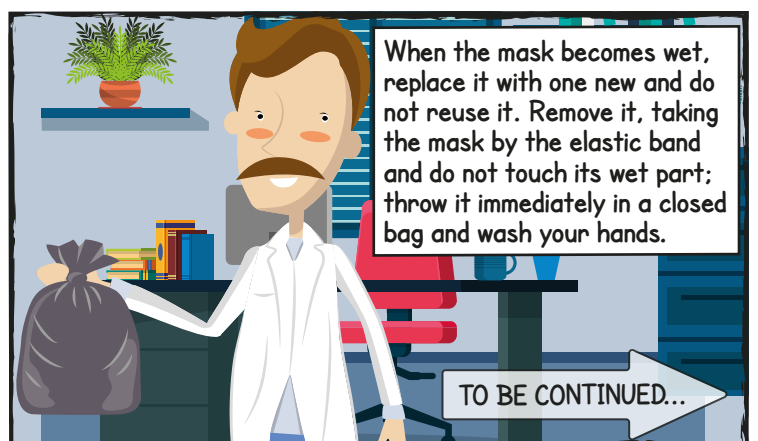

Place the elastic bands around the ears and pull the mask from the top down to completely relax the folds. In this way you will get maximum coverage of the face minimizing the layers through which you can breathe. Model the upper part of the mask on the bridge of the nose to reduce to minimum air leaks.

Keep the minimum distance of 1.5 meters from other people when possible (otherwise wear the mask)

Periodically clean the work surfaces with alcohol or chlorine based sanitizer.

When the mask becomes wet, replace it with one new and do not reuse it. Remove it, taking the mask by the elastic band and do not touch its wet part; throw it immediately in a closed bag and wash your hands.
