

# MISTER OSAI COMICS

Mr. Osai was born with his company: he has been here from more than 25 years and today wants to tell us something more about Osai...

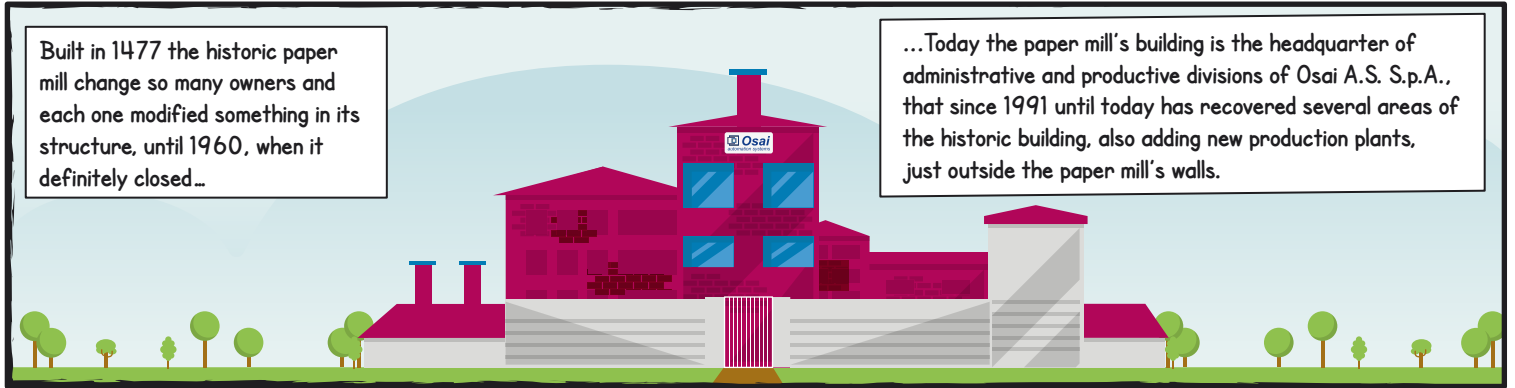

Powered by:

N° 1

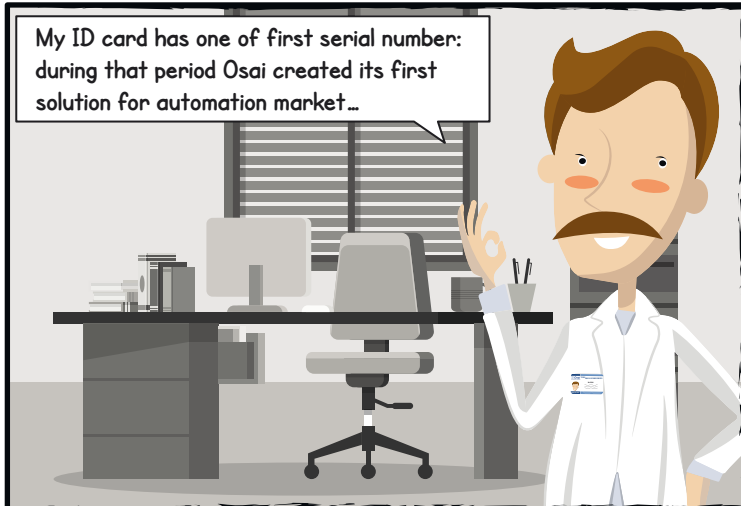

Entering my company headquarter everyday is like coming back in time to my first work day: it was in 1991 and Osai had just moved inside the Cartiera historic building, in Parella.

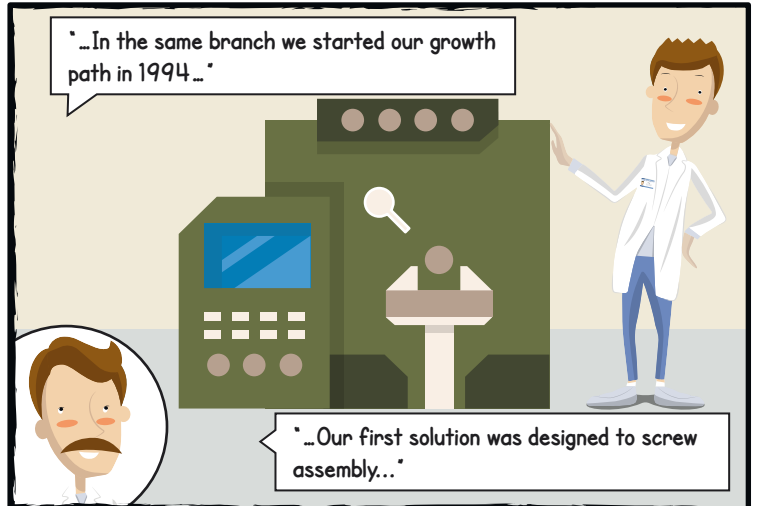

Built in 1477 the historic paper mill change so many owners and each one modified something in its structure, until 1960, when it definitely closed...

...Today the paper mill's building is the headquarter of administrative and productive divisions of Osai A.S. S.p.A., that since 1991 until today has recovered several areas of the historic building, also adding new production plants, just outside the paper mill's walls.

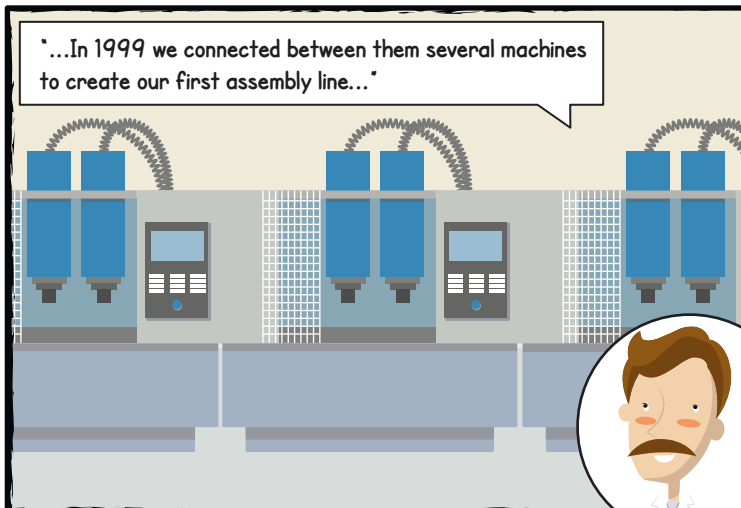

My ID card has one of first serial number: during that period Osai created its first solution for automation market...

"...In the same branch we started our growth path in 1994..."

"...Our first solution was designed to screw assembly..."

"...In 1999 we connected between them several machines to create our first assembly line..."

"...that in 2001 thanks to the addition of Robot Scara represented a great goal for Osai..."
